Sequence 9291, Application US/10767701
Subblication No. US20040172684A1
GENERAL INFORMATION
APPLICANT: Kovalic, David K.
APPLICANT: Cao, Yongwei
TITLE OF INVENTION: Nucleic Acid Molecules and Other Molecules Associated With
TITLE OF INVENTION: Plants and Uses Thereof For Plant Improvement
FILE REFERENCE: 38-21(53535)8
CURRENT FILING DATE: 2004-01-29
NUMBER OF SEQ ID NOS: 63128
SEQ ID NO 9291
LENGTH: 793
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      APPLICANT: IN CACALICA.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutovyo Osogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2, nb wsp. the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

ABRC Stock Number CS810670; T-DNA left border flanking sequences of Syngeric Arabidopsis Insertion Library (SAIL) lines are available through the Arabidopsis Biological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not single contiguous sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Hattori,M., Toyoda,A., Noguchi,H., Kojima,T. and Sakaki,Y.

Week jenoscope.come interest in the project of a collaboration of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Goosgawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoxI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's
library availability, please contact Kuniya Abe (abe@rtc.riken.jp). Tsukuba Institude, Bio Resource Center.

It currently consists of 36 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                 On Sep 5, 2000 this sequence version replaced gi:7329342. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html

```

contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved. 100 bp of 100 bp of 727 bp in length 100 bp of 719 bp in length 100 bp of 718 bp in length 100 bp of 719 bp in length 100 bp of 732 bp in length of 732 bp in length of 732 bp in length 100 bp of 718 bp in length 100 bp of 723 bp in length of 703 bp in length of 702 bp in length 720 bp in length in length in length bp in length in length in length bp in length in length in length in length in length in length in length in length in length bp in length in length in length in length in length in length in length bp in length ,05 of 20 of 701 bp 17 100 bp 786 br 100 bp of 719 bp i 100 bp of 717 bp i 100 bp of 741 bp i 100 bp 100 bp of 727 bp 100 bp of 717 bp : ď ď 734 bp ď đ ф ď đq ф ďq ď 100 bp of 731 1 100 bp of 735 1 100 bp of 724 l of 712 | 100 bp of 722 | 100 bp of 704 100 bp of 709 100 bp of 715 100 bp of 721 100 bp of 722 100 bp of 607 728 100 bp of 729 100 bp of 731 100 bp contig gap of 1 contig gap of 1 contig gap of contig gap of contig gob of contig gap of gap of contig gap of contig gap of contig gap of contig gap of contig gap of gap of gap of gap of contig gap of contig gap of contig gap of contig gap of contig gap of contig gap of gap of contig gap of gap of contig gap of gap of contig gap of contig gap of contig gap of contig contig contig gap of gap of gap of gap of gap of 720: 25397: 25497: 26104: 1624: 4038: 13991: 4869: 5804: 6638: 23844: 4969: 14814: 15516: 8888: .9729: 23022: 9066 12364: 13073: 17252:

Summary Statistics:
Sequencing vector: Plasmid; pUC18
Chenistry: Dye-terminator Big Dye
Assembly program: Phrap version 0.990329.

* NOTE: This is a 'working draft' sequence. It currently
consists of 12 contigs. The true order of the pieces
to not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
trus of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence
as soon as it is available and the accession number will

* be preserved.
